

ELLERTEK PLANT CONNECT · FOR FACTORIES & PLANTS

Your plant's people and screens, connected — new build or running.

For factories, plants and warehouses — whether you are still building or already in production. One Ellertek team surveys your site, runs the cabling, installs your workforce system and your information screens, and trains your people — one project, one contractor, one number to call.

WHAT'S INCLUDED

01

WFA

Workforce management

- ✓ Fingerprint readers at the gate and shift points — supplied, mounted and wired
- ✓ Attendance from a fingerprint, not a signature
- ✓ Leave with approvals, employee records, appraisals, disciplinary cases
- ✓ Reports to Excel for payroll
- ✓ Data stays on your own server

02

EVENT OS

Information displays

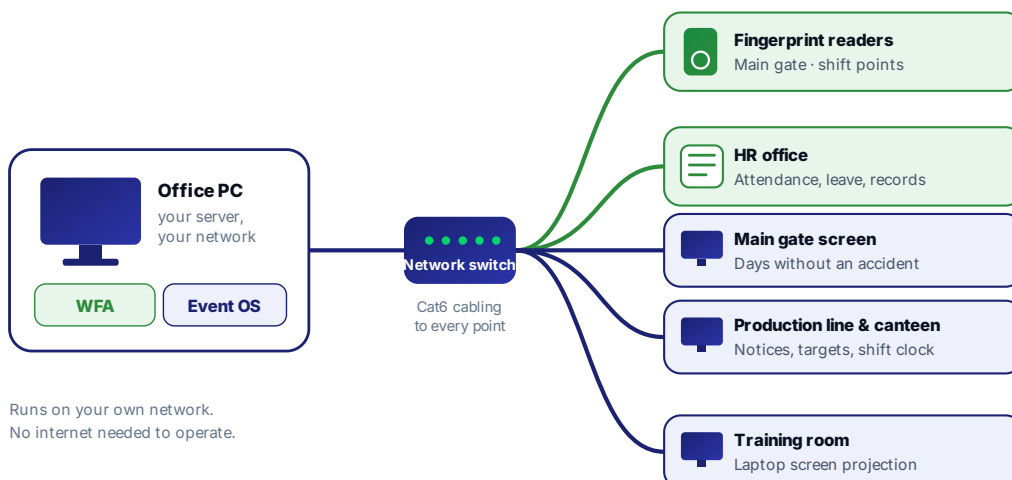

- ✓ "Days without an accident" counter at the gate
- ✓ Notices, safety talks and targets on the lines and in the canteen
- ✓ Gate & truck queue screens, shift clocks, recognition
- ✓ Emergency message on every screen in under a second
- ✓ Training room laptop projection — no cable

03

INFRASTRUCTURE

Cabling & network

- ✓ Site survey and cable-route design
- ✓ Structured Cat6 cabling to every reader and screen
- ✓ Switches, network cabinet, Wi-Fi where needed
- ✓ TV wall mounts and a player per screen
- ✓ Labelled, tested, with a cable map at handover

Runs on your own network.
No internet needed to operate.

What runs where. WFA and Event OS are software. They run on an ordinary Windows computer in your office; each TV has a small player that reads from it over your own network — no internet needed to operate. Power points are provided by your electrical contractor; we mark each one during the survey.

NEW PLANT OR ALREADY IN PRODUCTION — IT WORKS FOR BOTH

Building or commissioning

Cable once — before ceilings and trunking close; neater and cheaper than retrofitting.

Records from the first shift — staff enrolled on the reader as they join.

Safety from day one — the accident-free counter starts with your first working day.

Already in production

Installed around your shifts — area by area, at shift changes, nights or weekends, so lines keep running.

Paper registers retired — staff enrolled shift by shift; attendance from a fingerprint, not a signature.

Notices that get read — safety messages and targets on screens every worker passes.

Either way — one contractor. No finger-pointing between a cabling firm, an HR vendor and a screen supplier. One team, one support line.

HOW IT WORKS

- 01 Talk to us**
Call or WhatsApp. Tell us where the plant is and roughly how many people work there, or will.
- 02 Free site visit**
We walk the site with your plant manager, HR and safety lead: gates, lines, canteen, offices, training rooms.
- 03 Design & itemised quote**
A layout drawing with every reader, screen and cable run, and a quote listing every item.
- 04 Installation**
Cabling, network, readers, screens and software — scheduled around your shifts or your other contractors.
- 05 Training & go-live**
Staff enrolled on the readers; HR, supervisors and screen editors trained.
- 06 Support**
One support line for all three parts, in English and Kiswahili.

At handover you have

- Fingerprint attendance running, staff enrolled
- Information screens live at every agreed point
- A labelled, tested network and cable map
- Trained HR, supervisors and screen editors
- Admin guides and access details for your team
- A support agreement with a named contact

Good to know

- No internet needed to operate — only once, to activate licences
- Readers keep clock-ins through power cuts; screens return to where they were
- Your data stays inside your plant
- Each part can also be quoted on its own

QUOTED PER SITE · NO PRICE LIST

Every plant is different. Let's walk yours.

Book a free site visit. After the visit you get a layout drawing and an itemised quote — no obligation.
